

## State of Michigan - M9.7

William C. Allen (#629)

I use lots of small values and plate blocks, etc. on my reports to Lansing. I get them all back. The 22¢ block shown above shows the modified "M" before the device was cleaned and reworked by Cummins. You can see that some of the pins are already gone (damaged) on the right hand block on the upper right-hand 3¢ stamp.

Michigan uses tons of perfin and the new 15-head device is not working out well at all. The state bought two 15-head punch devices and as you can see is experiencing difficulty with the new machines.
